

SECRET

TRIP REPORT

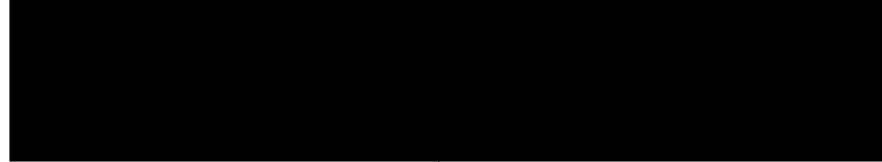

11 January 1963

DATE: 5 December 1962 PM

PLACE:

ATTENDEES:

25X1A

PURPOSE: To present requirements for digitizing comparators for on-line service with the Univac 490 computer.

DISCUSSION:

1. This contact was recommended by [REDACTED] of the Naval Research Lab. He asserted that [REDACTED] solidstate electronic counter is among the best on the market. A copy of the specifications is attached. Cost is approximately [REDACTED] for six decades. 25X1A

2. The performance of this counter is considerably higher than the one [REDACTED] will market this spring. In addition, it does not represent a new development for them, since they have been producing other solidstate counters for some years. 25X1A

3. We were given a quick tour through the plant. Design, engineering, production and quality control of solidstate electronic modules and digital components appeared to be highly optimized. 25X1A

CONCLUSIONS AND RECOMMENDATIONS:

1. [REDACTED] is well-organized small business, philosophically oriented toward the highly-competitive commercial market. 25X1A

2. Product-line is keyed to very high performance and reliability at moderate cost.

3. [REDACTED] welcomes special purpose requirements and is well-equipped to design and produce accordingly. 25X1A

4. It is recommended that both the off-shelf equipment line and special purpose development capabilities of this corporation be considered when related requirements exist.

25X1A
